Press Release

Slaughter's enhanced Ground Bond tester receives UL safety agency listing mark

The 2660 has received the C-UL US listing mark

Lake Forest, Illinois, Jan. 2004 - Announced today by Slaughter Company, a leading manufacturer of hipot testers and other electrical safety testing equipment is the addition of the C-UL US listing mark to their 2660 enhanced Ground Bond tester. Underwriter's Laboratories is one of the most recognized safety agencies in the world. The C-UL US mark provides safety certification acceptable in the United States and Canadian markets. The listing mark provides operator safety by ensuring that the 2660 has been inspected and passed all the tests called out in UL Specification 3111. These tests include dielectric strength tests, ground bond and insulation resistance tests. Having passed these tests means that the 2660's design and operation has been determined to be safe for operator use. The C-UL US listing mark also complies with National Recognized Testing Laboratory (NRTL) requirements from The U.S. Department of Occupational Safety and Health Administration (OSHA) making the 2660 compliant with regulations for a safe workplace.

The 2660 is a 60 amp ground bond tester that provides advanced features including a liquid crystal display, electronic ramp and dwell, test setup memories, milliohm offset capability, and advanced remote control. All of these features make the 2660 a safe and reliable instrument and simplify the user interface. The LCD will allow operators to view clear and accurate test results and set up parameters. Electronic ramp and dwell will provide consistent and accurate timing. Test setup memories will allow test parameters to be stored and recalled for ease of use. The milliohm offset capability will minimize the effect of test lead resistance while the remote control provides an operator all the basic remotes required to configure the instrument through simple PLC relay control. The 2660 can be used stand alone or interconnected to the 2900 series of enhanced Hipot testers. The 2660 is also CE approved and TÜV-GS safety agency listed to meet international requirements.

For over 45 years, Slaughter Company has been providing innovative, dependable and cost-effective solutions for electrical safety testing. Contact the company at 1-800-504-0055, e-mail at info@hipot.com or visit our site on the World Wide Web at <http://www.hipot.com>
